Detack Exhibits at RSA Conference 2016

**Launch of Enterprise Password Assessment Solution EPAS
in North America**

Ludwigsburg/Germany, February 25. Detack GmbH will be part of this year´s RSA conference to introduce its unique Enterprise Password Assessment Solution EPAS to the North American market. An independent supplier of high quality IT security audits and in-house developed IT security products, Detack will be present in San Francisco from February 29 – March 3 as part of the German pavilion, North Expo Booth N4020/03.

Identifying Weak Passwords

With more than 15 years of experience in cyber security and with a strong focus on the financial and insurance market, Detack ranks amongst the top three IT security audit firms in Germany. Passwords, today more than ever, pose an incalculable risk to cyber security in modern enterprises and organizations as many users still set weak, predictable passwords. "More than half of the passwords used in corporate IT-infrastructures do not meet minimum security requirements", confirms Costin Enache, Co-Founder & Lead Auditor at Detack. "This must not only be prevented, but also detected and corrected. With EPAS we present an on-premises software as a service solution for automatic and periodical assessment of the password quality and compliance throughout an enterprise." EPAS was developed especially to the needs of medium to large entities with a significant number of users. The technology is based on a fully automated process which retrieves all password-relevant data from a target system and measures the resilience of passwords against cyber-attacks. Doing so, EPAS meets the strongest data protection acts worldwide, never displaying a password in clear text. All data processing is conducted on a sealed, fully encrypted appliance, compliant to the Trusted Computing Group specification and installed on-site.

EPAS Technology Patented in North America

The trade show debut at this year´s RSA Conference is part of the Detack internationalization strategy and is taking place just when even the U.S. government addresses the issue of password security. "Only recently the White House gave the subject attention in its Cybersecurity National Action Plan. Therefore, we are very much looking forward to getting in touch with corporate and institutional IT security experts as well as identifying potential partnerships during the conference in San Francisco", says Claudia Frohnhoff, VP Sales & Marketing at Detack, and adds: "A special highlight during the RSA Conference will be to celebrate the granting of the US patent for EPAS."

Speaker at TeleTrusT/Symantec Security Solution Showcase

In addition to being present on the show floor during the RSA Conference, Detack has been invited to give a presentation on password security during the TeleTrusT/ Symantec Security Solution Showcase on February 29 in the afternoon in the Hotel Courtyard Marriott San Francisco. This side event to the RSA conference presents current German IT security innovations.
